The Westfall Model 2800 Wafer Style Static Mixer has a slim profile, yet delivers rapid mixing with very low headloss. Its computer-designed orifice with bent tabs generates complete mixing through a combination of alternate vortex shedding and intense shear zone turbulence.

High performance, short laying length, simple installation and no maintenance requirements make the 2800 the mixer of choice for almost any application. Its thin profile allows it to be air shipped anywhere in the world at relatively low cost. It is the space-saving and money-saving solution for any installation.

**Advantages**
- Excellent Mixing
- Low Cost
- Short Laying Length
- Integral Injection Fittings
- Low Headloss
- Easy Installation
- Long Service Life
- No Maintenance Requirements
- No Moving Parts
- Available in pipe diameters up to 120"
- Available in Any Material: PVC, FRP, 316 Stainless Steel, Titanium, Kynar, Teflon, etc.

**Typical Applications**
If you operate any of the following processes, you could benefit from installing Westfall Model 2900 Variable Flow Static Mixers:
- Water Treatment
- Chemical Blending
- Dissolving Gases
- Polymer Blending
- Flocculant Blending
- pH Control
- Potable Water
- Waste Water
- Chlorination
- De-Chlorination
Simple, Elegant Design Does the Job Efficiently

The Westfall Model 2800 Static Mixer features a uniquely shaped orifice with two bent tabs. The orifice and the angle of the tabs were computer designed and tested to arrive at the optimal shape for mixing with minimal headloss. There are no moving parts to service or attract residue. Suitable for a wide range of applications, the 2800 is highly effective, compact and economical.
Florida Facility Needed Compact Performer
A municipal water treatment facility in Florida needed a mixer that could do the job where space was at a premium. The budget was tight and quality specifications had to be met. The Westfall Model 2800 provided the answer.

Arizona Treatment Plant Installs Model 2800 Mixers in Special Materials
When Currier Construction Inc. built a water treatment plant West of Tucson, they required mixers that could hold their own against the caustic chemicals – Chlorine Sodium Hypochlorite, Sulfuric Acid and Sodium Hydroxide – used to correct pH, chlorinate, disinfect and oxidate.

They installed two 8" and two 6" Westfall Model 2800 Mixers, one made of PVC, with CPVC corp-stop and a PVC solution tube diffuser, and the others made of 25% Glass filled PTFE (Teflon®) with corp-stops and solution tube diffusers made of PVDF (Kynar®). The gaskets are all EPDM.

Chuck Reading of REACO Associates LLC says, “Westfall supplied the corp-stops and solution tube diffusers, fitting them and trimming the tubes to the precise spot at the center of the tab of the mixer,” to facilitate optimal mixing.

The six- and eight-inch diameter Westfall 2800 mixers used in this plant in Ajo, Arizona, have laying lengths between 2.678” and 3”, depending on the corp-stop being used.

See Our Web Site for Our Complete Product Line, Including:
- The Model 2850 Inline Static Mixer was designed for applications requiring precision chemical blending. The 2850 consists of a Model 2800 Mixer plate built into a custom spool piece to fit any size laying length.
- The Model 2900 Variable Flow Mixer was designed to accommodate situations where flow rate fluctuates wildly.

**Standard and Custom Designs and Materials**

- Materials of Construction: PVC, FRP, 316 Stainless Steel, Titanium, etc.
- Custom materials and configurations are available.
- Mixer plates are offered in 0.7 – 0.9 -Beta ratios

**Mixer Plate Beta Openings**

Alden laboratory CoV = .008 for .7 beta ratio with excellent mixing at 1-3 FPS
Alden laboratory CoV = .009 for .8 beta ratio with excellent mixing at 3-8 FPS
Alden laboratory CoV = .050 for .9 beta ratio with excellent mixing at 8-11 FPS

CoV = standard deviation of the test data divided by the average of the test data
